

Darcrus

What is the reasoning for moving Darcrus from Nxt to Waves?

It is time to unify the Sigwo Technologies' tokens into a single token platform. By moving Darcrus to Waves, it will take advantage of Mercury being a base tx fee token for activities and allow for one place to store both tokens. Mercury is already a popular Waves token and is accepted by most major leasing nodes as payment, so our transactions are promptly added to the Waves blockchain. Also, their DEX is popular and faster than any others I have seen. The matcher system is unique and allows the orders to be fast.

This does not change Jupiter or the Jupiter Development Framework.
